1. Roku

   React, java, nginx, cloudfare, bootstrap

2. Pinterest

   Originally it was made by python and django. The engineers used redis and membase to handle catching. Application queuing is handled by rabbitmq

3. Airbnb

   Programming languages — Ruby and Javascript.
   Framework — Ruby on Rails. RoR framework is well known for its awesome capabilities that speed up development and, as a result, reduce costs and TTM (time to market).
   JavaScript framework — React. A JavaScript UI library, React, is a flexible and efficient solution for building sleek user interfaces.
   Web server — Nginx. Nginx is a powerful HTTP and proxy server that speeds up content delivery, ensures Airbnb's security and scalability. Not only Airbnb reaps the benefits of Nginx; tech industry giants like Instagram, Netflix, and Zappos use NGinx too.
   Key-value storage — Redis. Redis provides a scalable cache infrastructure and a key/value database.
